

Care for Potted Christmas Trees

- Potted trees are grown in full sun & this is their optimum growing condition.
- For your future enjoyment, trees can be either potted into a larger sized container or planted directly in the ground
If potted up, use good quality potting mix & slow release fertiliser.
- Plants in pots require frequent watering & use of a saucer can reduce the amount.
- If planted in the ground, regular watering & pruning are required to maintain their shape. Be aware if not maintained, they can grow into a large tree.
- If you take your potted Christmas tree inside, beware reintroducing into outside conditions may result in plant deterioration. Gradual transition can help reduce this shock.
